OP/OB Graduation Statistics: 2011-2019
LST/Undecided Retention: 2011-2024

Office of Academic Data Solutions

Original Data Request

1. Do we know how many of our students accepted as OB or OP graduate with the major to which they originally applied?
2. What percentage of LST and UND majors remain in a LST or UND major into the second year if they retain?

Summary

Students admitted with an OB/OP code have a 6-year graduation rate between 10-15 percentage points lower than students admitted with all other codes (Figure 1). However, the difference reduces to 5-10 percentage points when controlling for high school GPA (Figure 3). Over the selected time period, 59% of graduates admitted with OB/OP codes changed their major between admission and graduation, compared to only 26% of graduates admitted under other admissions codes.

From 2011-2024, 48% of LST retainees changed majors between their first and second year, compared to only 16% of retainees of other majors. Undecided retainees were the most likely to change majors, with 56.87% changing between their first and second year (Figures 4 and 5).

Notes:

- The following data is limited to new transfer students and first-time freshman.
- The OB/OP data is limited to the entering Fall cohorts from 2011-2019, and the LST/Undecided data includes the fall cohorts from 2011-2024.
- The yearly counts include the Fall cohort only.
- Undecided students are excluded from the percentage of students who graduate with the same major for which they applied, as undecided students are required to change their major.
- Students graduating with certificates are excluded from the graduation statistics.
- Students in AA and AS degree programs are included.
- For combined degrees, a student was considered to have graduated without any program changes if they completed the undergraduate portion of the combined program.
- Naming conventions for the combined degrees, as well as certain single-degree programs, created some inconsistencies when trying to determine if a student graduated with the same degree that they applied for. See table in appendix for programs that were considered equivalent, despite having differing major codes.

Figure 1: OB/OP Graduation Statistics

	OB/OP			All Others		
	n Enrolled	% Graduated	% Graduates with No Program Change (Excluding Undecided Majors)	n Enrolled	% Graduated	% Graduates with No Program Change (Excluding Undecided Majors)
