# Gender Statistics: 2015-2025
# The Tobin College of Business

Office of the Provost

2025-11-19

## Summary

For the previous 10 years, the proportion of female students has been increasing across all Colleges of the institution, with the exception of CCPS and Tobin, where the proportion is decreasing and remaining consistent, respectively (Figure 1). These numbers include students at the undergraduate as well as graduate levels. Among the new student population within Tobin, first-time freshman are maintaining a consistent proportion of female students, while transfer students are becoming increasingly male (Figure 2).

Retention rates have remained consistent for the past 10 years for both male and female Tobin students, while the overall university rate has declined. With the exception of the Fall 2020 cohort, female students have retained consistently higher than male students (Figure 3). Perhaps more importantly, retention rates among male and female students show extremely high correlations with their high school GPA quintile over this same time period, making it a stronger predictor of retention than gender alone. Male and female students in the bottom 3 high school GPA quintiles show very similar retention rates, with female students tending to retain at higher rates than male students in the higher GPA quintiles (Figure 4).

The proportion of commuter students (ie, the "commuter rate") has been consistent among male and female Tobin students over the past 10 years, with female students tending to commute at slightly lower rates than male students. The commuter rates of St. John's students as a whole has also remained consistent over this time period (Figure 5). These figures include both graduate and undergraduate student populations.

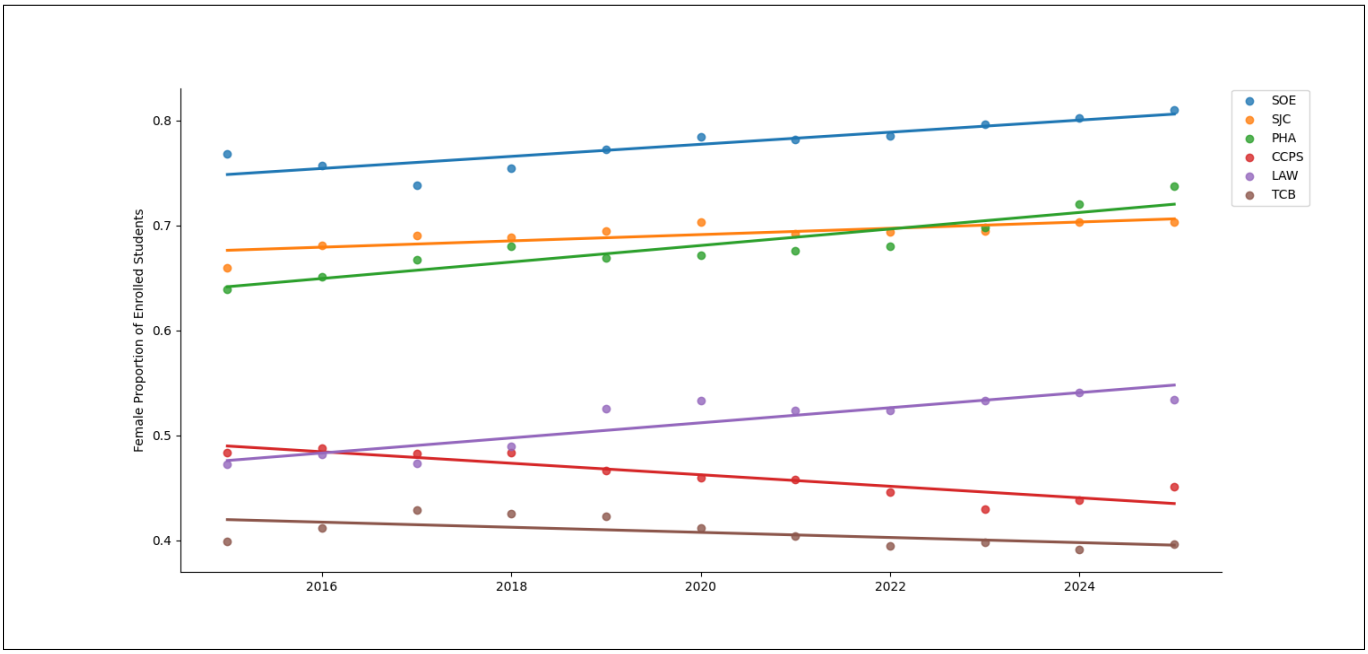

Among all admitted students to Tobin, both male and female students have shown increasing rates of Early Action admission over the past 10 years, consistent with the university trend. There does not seem to be a significant difference in Early Action admissions based on gender (Figure 6). These figures include undergraduate students only.

Notes:

- Data in figures 1, 2, 3, 5, and 6 include enrollments from the Fall of that year only.
- Retention rates in figures 3 and 4 refer exclusively to first-time freshman who enroll the following fall. For example, a freshman entering Tobin in Fall 2020 would be considered "retained" if they enrolled in Fall 2021.

- The "regular admission rate" is the compliment of the "Early Action rate" in figure 6. For example, if the Early Action rate for a given year is 40%, then it is implied that 60% of students were admitted as a Regular Decision.

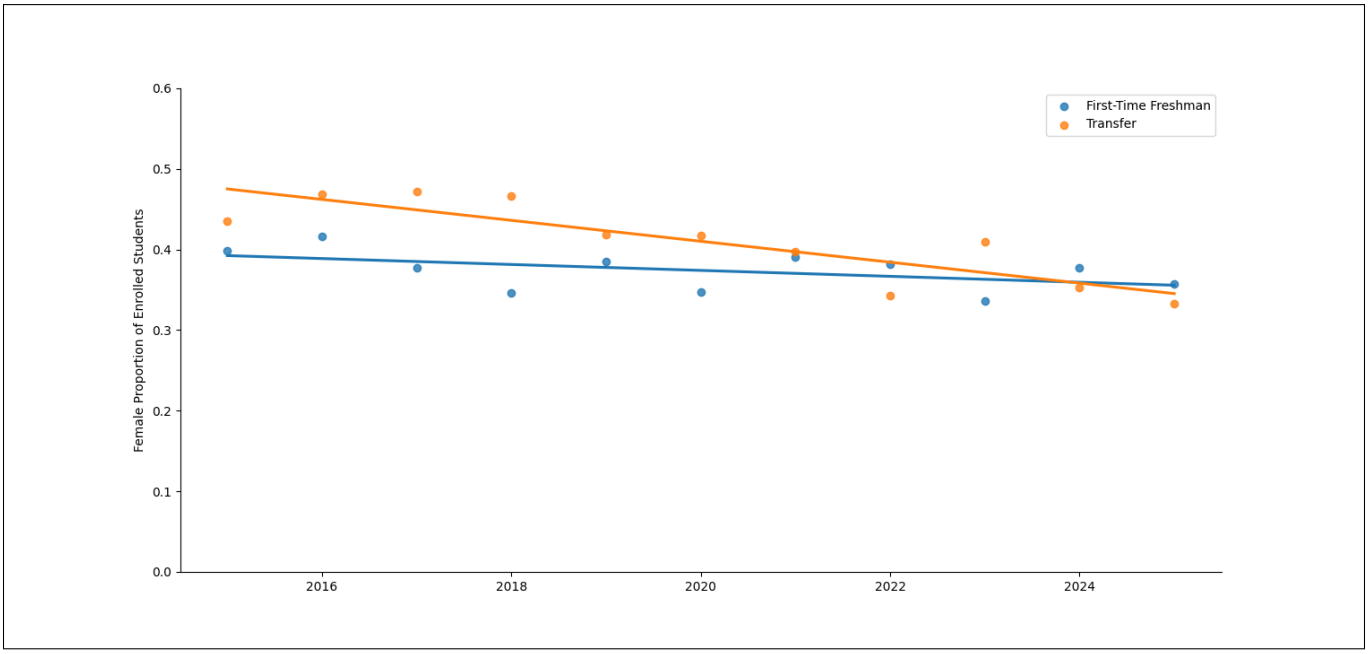

Figure 1: Female Proportion of Student Population

| College | Fall 2025 Proportion of Female Students | 10-Year Trend* |
|---|---|---|
| SOE | 0.81 | Increasing |
| SJC | 0.70 | Increasing |
| PHA | 0.74 | Increasing |
| CCPS | 0.45 | Decreasing |
| LAW | 0.53 | Increasing |
| TCB | 0.40 | Consistent |

*trend based on 95% confidence interval

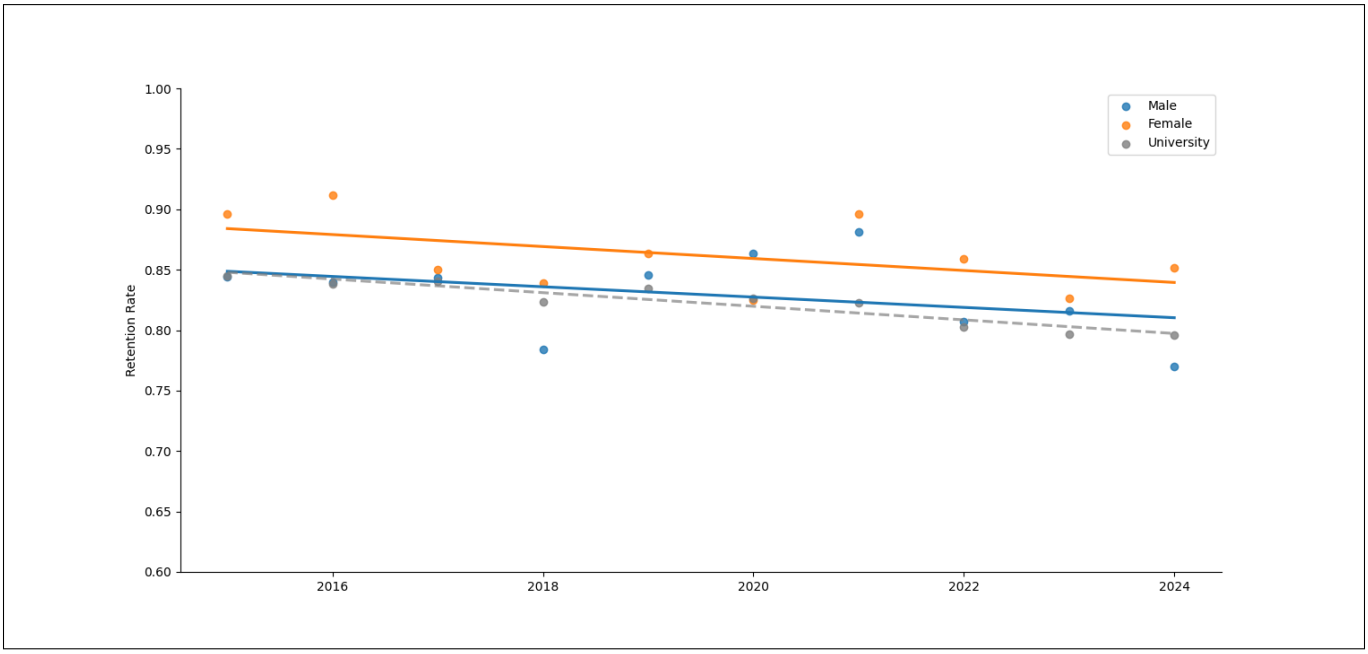

Figure 2: Female Proportion of New Student Population (Tobin)

| Student Type | Fall 2025 Proportion of Female Students | 10-Year Trend* |
|---|---|---|
| First-Time Freshman | 0.36 | Consistent |
| Transfer | 0.33 | Decreasing |

*trend based on 95% confidence interval

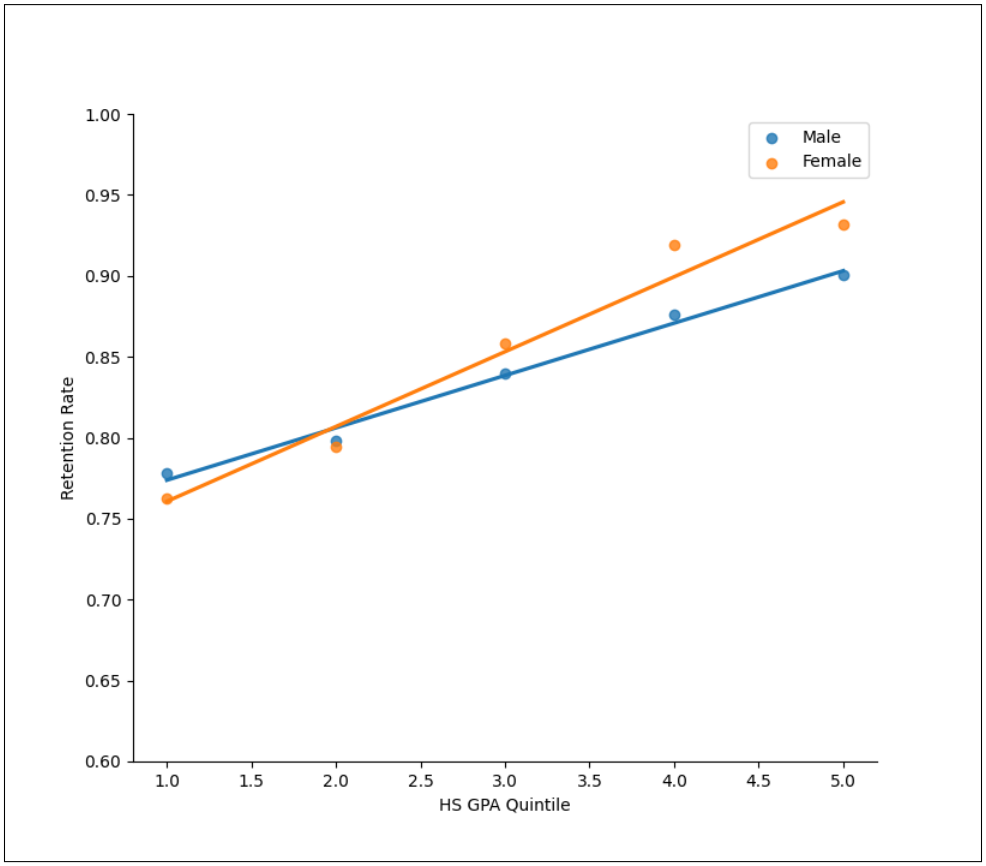

Figure 3: Retention Rates by Gender

| Gender | Fall 2024 Retention Rate | 10-Year Trend* |
|---|---|---|
| Male | 0.77 | Consistent |
| Female | 0.85 | Consistent |
| University | 0.80 | Decreasing |

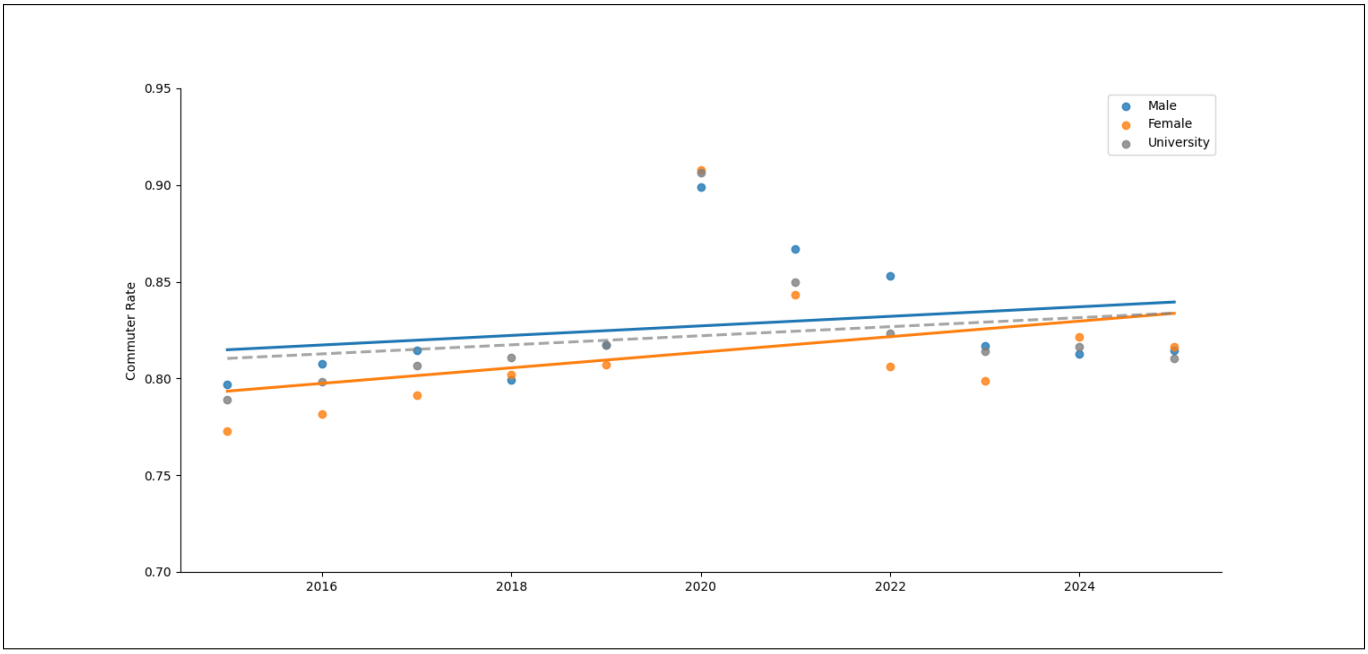

*trend based on 95% confidence interval

Figure 4: Retention Rates by High School GPA Quintile (Tobin)

| Gender | Retention - HS GPA Quintile Correlation |
|---|---|
| Male | 0.99 |
| Female | 0.98 |

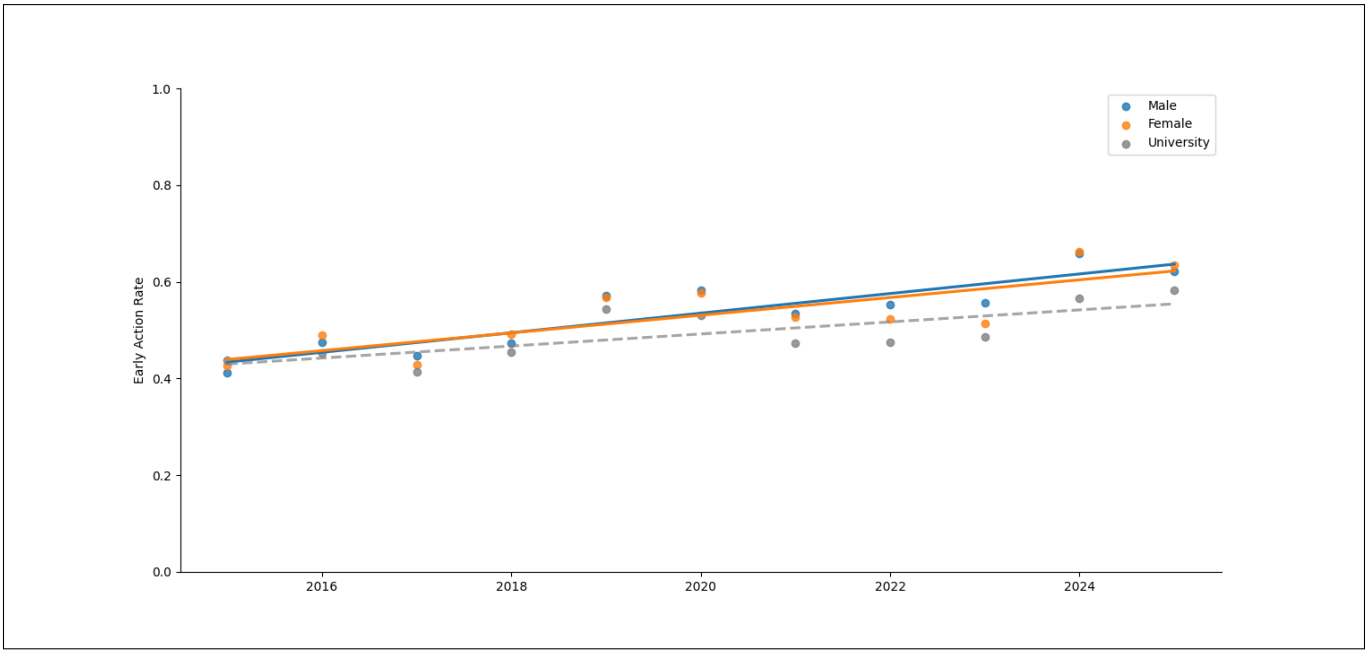

Figure 5: Female Proportion of Commuter Student Population

| Gender | Fall 2025 Commuter Rate | 10-Year Trend* |
|---|---|---|
| Male | 0.81 | Consistent |
| Female | 0.82 | Consistent |
| University | 0.81 | Consistent |

*trend based on 95% confidence interval

Figure 6: Female Proportion of Early Action Admissions

| Gender | Fall 2025 Early Action Rate | 10-Year Trend* |
|---|---|---|
| Male | 0.62 | Increasing |
| Female | 0.63 | Increasing |
| University | 0.58 | Increasing |

*trend based on 95% confidence interval
